CONTENTS OF VOLUME 39

Number 1, February 1976

EDITORIAL iii

H. H. STIBBS AND J. R. SEED. Elevated Serum and Hepatic Tyrosine Aminotransferase in Voles Chronically Infected with *Trypanosoma brucei gambiense* 1

CARMEN-INES RIVERA-ORITZ AND RUTH NUSSENZWEIG. *Trichinella spiralis:* Anaphylactic Antibody Formation and Susceptibility in Strains of Inbred Mice 7

R. E. B. HANNA. *Fasciola hepatica:* A Light and Electron Autoradiographic Study of Shell-Protein and Glycogen Synthesis by Vitelline Follicles in Tissue Slices 18

SHIRLEY E. MADDISON, MARTIN D. HICKLIN, AND IRVING G. KAGAN. *Schistosoma mansoni:* Reduction in Clinical Manifestations and in Worm Burdens Conferred by Serum and Transfer Factor from Immune or Normal Rhesus Monkeys 29

W. J. I. VAN DER GULDEN AND A. J. M. VAN ASPERT-VAN ERP. *Syphacia muris:* Water Permeability of Eggs and Its Effect on Hatching 40

W. J. I. VAN DER GULDEN AND A. J. M. VAN ASPERT-VAN ERP. *Syphacia muris:* Response to Environmental Stimuli when Hatching *in Vitro* 45

MICHAEL W. SIMON, JANICE M. RUSNAK, AND ANTONY J. MUKKADA. Toxicity of Bilirubin to *Leishmania tropica* Promastigotes 51

PHILLIP H. KLESIUS, THEODORE T. KRAMER, AND JOHN C. FRANDSEN. *Eimeria stiedai:* Delayed Hypersensitivity Response in Rabbit Coccidiosis 59

CATHERINE A. CRANDALL. *Ascaris suum:* Homocytotropic Antibody Responses in Mice 69

AFZAL A. ANSARI, M. A. KHAN, AND S. GHATAK. *Ascaridia galli:* Trypsin and Chymotrypsin Inhibitors 74

K. N. MASIHI, O. MACH, A. VALKOUN, AND J. JÍRA. *Toxoplasma gondii:* Large-scale Purification by Zonal Density Gradient Centrifugation ... 84

R. BARCLAY MCGHEE. *Plasmodium gallinaceum:* Response of Malarious Chicken Embryos to Injection of Serum from Hyperimmunized Chickens 88

R. S. PHILLIPS AND D. WAKELIN. *Trichuris muris:* Effect of Concurrent Infections with Rodent Piroplasms on Immune Expulsion from Mice 95

ERNEST A. MEYER. *Giardia lamblia:* Isolation and Axenic Cultivation 101

R. E. B. HANNA AND L. T. THREADGOLD. *Fasciola hepatica:* Stereological Analysis of Effects of Certain Metabolic Inhibitors on Synthesis of Secretory Bodies by the Tegument of Tissue Slices 106

GORDON H. BALL AND JOWETT CHAO. Use of Amino Acids by *Plasmodium relictum* Oocysts *in Vitro* 115

L. T. THREADGOLD. *Fasciola hepatica:* Ultrastructure and Histochemistry of the Glycocalyx of the Tegument 119

W. STAHL, D. N. COLLINS, P. BENITEZ, G. TUREK, AND H. GAAFAR. *Toxoplasma gondii:* Disease Patterns in Mice Treated with the Folate Antagonist Methotrexate 135

E. Magliulo, E. Concia, M. Azzini, D. Bonizzoni, and D. Scevola. *Toxoplasma gondii:* A New Diagnostic Approach Based on the Specific Binding of Erythrocytes to Lymphoid Cells 143

Parasitological Review

Experimental Parasitology

Instructions to Authors

Experimental Parasitology publishes research papers on the experimental forefront of parasitology and significant reviews of all aspects of parasitism. Research papers are not solicited but should be submitted to the editors. Reviews may be submitted or invited; before preparing an unsolicited review, inquiry should be made and an outline of the manuscript should be submitted. All manuscripts and editorial correspondence may be addressed to the editor or associate editors, whose names and addresses appear facing the inside front cover.

Language. The Journal publishes in French, German, Spanish, and English. Whichever the language, it should be used idiomatically.

Copies. Manuscripts should be submitted in triplicate, typed with double-spaced lines and wide margins on standard size white paper (about 21.5 × 28 cm).

Title. If possible, the specific designation of the parasite, followed by a colon, should precede the rest of the title. The common or scientific name of the host should appear at the end of the title (e.g., *Ascaris suum* and *Phocanema decipiens*: Cross Immunity in Orally Infected Pigs and Rats). For review manuscripts, the title, as described above, should be followed by the bracketed heading: (A Review).

Credits and Disclaimers. Avoid footnotes. Disclaimers, funding support, and other circumstantial information should be included in the *Acknowledgments* section.

Authors and Their Addresses. The full professional mailing addresses of all authors must be included with their names. When co-authors are at different institutions, the different addresses should follow each author's name. Only if a change of address has occurred, should a footnote be used to indicate the author's present address. The manuscript title and the author's name and address should be the only material appearing on page 1 of the manuscript.

Publication Dates. The date on which a manuscript is finally accepted will be inserted after the author's name and address.

Form. Following the title and author page (page 1), each research manuscript should contain the following sections and headings: *Abstract, Index Descriptors, Introduction, Materials and Methods, Results, Discussion, Acknowledgments* (if any), *References.* Pages should be numbered consecutively from the title–author page through the references. Departure from this format should be justified in a separate letter. The format for reviews is identical with that for experimental papers up to and including the *Introduction.* The body of the review should be divided in a manner appropriate to the subject matter. Acknowledgments (if any) and references should follow the body of the review and the pagination should be continuous. Long reviews may have an *Outline* between the *Index Descriptors* and *Introduction.*

Abstract. The abstract must be factual (not indicative).

Index Descriptors. A list of key words and phrases should follow the abstract. They should reflect the contents of the paper accurately and help to describe it to scientific nonexpert readers. The taxonomic designations of all organisms discussed in a manuscript must be included. Larger taxonomic categories should also be mentioned (e.g., in a paper on *Watsonius watsoni,* the term "trematode" should appear as an index descriptor).

References. Literature is to be cited in the text by the author's surname and date (e.g., Glaser and Stoll 1940), not by number. The reference list should be arranged first alphabetically by name and secondarily by date. Each reference should consist of the names of all authors, the date of publication, the exact title, the full name (do not abbreviate) of the journal, the volume, and the inclusive pages as in the following examples.

Taliaferro, W. H., and Taliaferro, L. G. 1922. The resistance of different hosts to experimental trypanosome infections with special reference to a new method of measuring the resistance. *American Journal of Hygiene* **2**, 264–319.

Stauber, L. A. 1970. Leishmanias. *In* "Immunity to Parasitic Animals" (Jackson, G. J., Herman, R., and Singer, I., Eds.), Vol. 2, pp. 739–765. Appleton-Century-Crofts, New York.

Illustrations. One copy of each figure should be submitted as a glossy photographic print or as the original drawing with the best copy of the manuscript. Tables must be typed. If adequate for reviewers' perception, photoduplicated copies of figures may accompany the two other copies of the manuscript. A number should be given to figures, tables, or illustration legends, but not to the pages on which they appear. Place only one table on a sheet of paper. When illustrations refer to parasite or host, the name of the organism should be spelled out completely at least once in each table heading or figure legend.

Special Nomenclature, Abbreviations, etc. Consult the biology editor's style manual [Council of Biology Editors' Committee on Form and Style. 1972. "CBE Style Manual" (3rd ed.). American Institute of Biological Sciences (3900 Wisconsin Avenue, N.W., Washington, D.C., 20016)] for the principles of overall style and such details as appropriate abbreviations.

Whenever electron microscopy is the subject of reporting the accepted unit is the micrometer, μm. The magnification of all electron and light micrographs should be indicated by a bar on the print.

Whenever enzymes are the subject of reporting, the Enzyme Commission (EC) number must be used for accurate identification and retrieval purposes in the text, summary, and index descriptors; EC numbers may be found in: International Union of Pure and Applied Chemistry and International Union of Biochemistry. 1972. "Enzyme Nomenclature Recommendations" (American Elsevier Publishing Co., 52 Vanderbilt Ave., New York, N.Y. 10017).
